

Colour Gear Wire Less 12Volt DC  
552-062-99

ACCESSORIES

## SPECIFICATIONS

## RGB COLOUR GEAR

### OVERVIEW

- Controllable via radio and easy to network
- Compact dimensions, hidden assembly due to wireless technology
- 12 program, 3 of them editable with USB-Dongle and software
- High output power of 4A per channel

### GENERAL

The new colour gear wireless is radio controlled with 868.3mhz. Up to 100 modules are building a radio network automatically. Effects and colour changes run absolutely synchronously. The colour gear wireless is an optimal and flexible solution for architectural lighting.

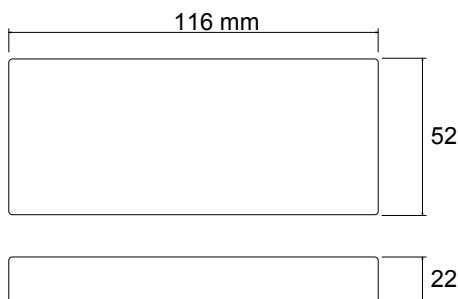

Simply connect LED dc power supply to power supply - ready. Due to the radio network colour changes run absolutely synchronously (except for random effects), even later connected modules will be synchronizes automatically.

Free controlling software upon request.

Programs:

- pre-installed colour
- three determined colour
- five random effects
- three user defined colour changes
